BLUEROCK DIGITAL

Website Opportunity Review

Your customers are searching. The question is - can they find you?

- 93% of online experiences start with a search engine - if you're not visible, you're invisible.
- Over 60% of Google searches now end without a click, with users taking answers directly from AI Overviews.
- 1 in 4 people are already using AI tools like ChatGPT to find and recommend businesses.

This report reviews how ready your website is for both worlds: **Search (SEO)** and **AI Answers (AEO)**. Think of it as making sure your website works as hard as you do.

LIVE GOOGLE SEARCH VISIBILITY	
SEARCH TERM (TARGET)	POSITION & INSIGHT
Mexican flavours	Not in top 20 (Missed opportunity)
Mad Mex	Not in top 20 (Missed opportunity)
authentic Mexican	Not in top 20 (Missed opportunity)
fresh Mexican food	Not in top 20 (Missed opportunity)
customise meal	Not in top 20 (Missed opportunity)

EXECUTIVE SNAPSHOT - 6 FINDINGS REVIEWED

WEBSITE HEALTH Website health Good Severity	GOOGLE LISTING H1 tag optimisation High Severity	BUSINESS IDENTITY Schema markup implementation Good Severity
AI READABILITY Content hierarchy for AEO Medium Severity	CUSTOMER QUESTIONS FAQ content and schema alignment Good Severity	AI PRESENCE Holistic AI visibility signals Medium Severity

OVERALL SEARCH FOUNDATION

● Functional but Underperforming

The basics are in place. Targeted improvements will move you from 'found sometimes' to 'consistently recommended'.

6/10

CRITICAL & IMPORTANT FINDINGS

High & Medium Severity

Four findings requiring attention to improve search visibility and AI extraction.

WEBSITE HEALTH

Website health

Good Severity

The website appears to be technically sound, with no immediate critical issues detected from the provided information.

COMMERCIAL CONSEQUENCE

A healthy technical foundation ensures search engines can efficiently crawl, index, and rank the website, contributing to organic visibility.

→ Continue to monitor core web vitals and server logs for any emerging technical issues.

Quick win

Priority 1

GOOGLE LISTING

H1 tag optimisation

High Severity

The page contains multiple H1 tags, including 'LA LUCHA MASK' and 'CATERING'. Best practice dictates a single, descriptive H1 tag per page that accurately reflects the main content.

COMMERCIAL CONSEQUENCE

Multiple or irrelevant H1 tags can confuse search engines about the page's primary topic, potentially hindering its ability to rank for relevant keywords and reducing organic traffic.

→ Revise the page's content structure to ensure only one H1 tag is present, clearly describing the main subject of the page. For example, 'Authentic Mexican flavours' or 'Mad Mex menu'.

Light lift

Priority 2

BUSINESS IDENTITY

Schema markup implementation

Good Severity

The website successfully implements JSON-LD schema markup, including FAQ schema.

COMMERCIAL CONSEQUENCE

Comprehensive schema markup helps search engines understand the content and context of the website, potentially leading to rich results in SERPs and improved click-through rates.

→ Regularly review and update schema markup to ensure it remains accurate and aligned with the latest schema.org guidelines and business offerings.

Quick win

Priority 3

AI READABILITY

Content hierarchy for AEO

Medium Severity

While schema is present, the page's H1 tag usage (multiple and potentially irrelevant) suggests a suboptimal content hierarchy that may not clearly signal the main topic to AI answer engines.

COMMERCIAL CONSEQUENCE

A poorly structured content hierarchy can make it difficult for AI to extract key information, reducing the likelihood of the website appearing in featured snippets or direct answers.

→ Ensure that content is logically organised with clear headings (H1, H2, H3) that guide both users and AI through the page's information, starting with a single, relevant H1.

Moderate build

Priority 4

— VISUAL EVIDENCE & REMAINING FINDINGS

Screenshots & Supporting Detail

CUSTOMER QUESTIONS

FAQ content and schema alignment

Good Severity

FAQ content is visually present on the /faq page and is correctly marked up with FAQPage schema.

COMMERCIAL CONSEQUENCE

Well-structured and schema-marked FAQ content enhances visibility in search results, particularly for voice search and AI answer engines, by providing direct answers to user queries.

→ Continuously update FAQ content to address common user questions and ensure the schema remains accurate and up-to-date with any content changes.

⚡ Quick win

AI PRESENCE

Holistic AI visibility signals

Medium Severity

The website benefits from strong AI visibility signals through comprehensive JSON-LD and FAQ schema. However, the presence of multiple and potentially irrelevant H1 tags could dilute these signals.

COMMERCIAL CONSEQUENCE

Strong, consistent AI visibility signals increase the probability of content being understood and surfaced by AI answer engines, driving qualified traffic and brand exposure. Inconsistent signals can hinder this.

→ Maintain robust schema implementation and address on-page content hierarchy issues, particularly the H1 tags, to provide a clear and unambiguous signal to AI answer engines about the page's core topic.

🔧 Moderate build

SUMMARY

Where to from here?

Fix now (effort estimation)

High & medium severity items

- 1

Quick win: Continue to monitor core web vitals and server logs for any emerging technical issues.
- 2

Light lift: Revise the page's content structure to ensure only one H1 tag is present, clearly describing the main subject of the page. For example, 'Authentic Mexican flavours' or 'Mad Mex menu'.
- 3

Quick win: Regularly review and update schema markup to ensure it remains accurate and aligned with the latest schema.org guidelines and business offerings.
- 4

Moderate build: Ensure that content is logically organised with clear headings (H1, H2, H3) that guide both users and AI through the page's information, starting with a single, relevant H1.
- 5

Quick win: Continuously update FAQ content to address common user questions and ensure the schema remains accurate and up-to-date with any content changes.

Immediate action items

1 Critical · 2 Important · 0 Low - Prioritised order recommended before full scoping.

Coming month 2

UX Audit - what we'll review next.

- **Navigation structure** - clarity, depth and mobile usability
- **Page load speed** - Core Web Vitals, LCP and INP assessment
- **Mobile tap targets** - size, spacing and accessibility on small screens
- **User journey mapping** - homepage to enquiry path review
- **CTA visibility** - placement, specificity and conversion friction

Coming month 2

Needs deeper validation

Useful observations - require more context before prioritising.

- ?

Deep crawl analysis - uncover orphaned pages or redirect loops via Screaming Frog.
- ?

Keyword cannibalization - requires Google Search Console data to validate intent overlaps.
- ?

Backlink toxicity - needs third-party tools (Ahrefs/SEMrush) to assess referring domains.
- ?

Content gap analysis - benchmarked against top 3 competitors in AI Answers.
- ?

Advanced Schema - assessing viability for HowTo or VideoObject schema integration.

Needs deeper validation

BLUEROCK DIGITAL · 6-MONTH ROADMAP

A structured programme - one focused layer at a time.

Each month builds on the last. A website is not a set-and-forget asset; even small, targeted improvements can strengthen brand visibility, search performance, and the overall customer journey over time.
