BLUEROCK DIGITAL

Website Opportunity Review

Your customers are searching. The question is - can they find you?

- 93% of online experiences start with a search engine - if you're not visible, you're invisible.
- Over 60% of Google searches now end without a click, with users taking answers directly from AI Overviews.
- 1 in 4 people are already using AI tools like ChatGPT to find and recommend businesses.

This report reviews how ready your website is for both worlds: **Search (SEO)** and **AI Answers (AEO)**. Think of it as making sure your website works as hard as you do.

LIVE GOOGLE SEARCH VISIBILITY	
SEARCH TERM (TARGET)	POSITION & INSIGHT
orthotics	Not in top 20 (Missed opportunity)
orthotic solutions	Not in top 20 (Missed opportunity)
orthotech lab	Not in top 20 (Missed opportunity)
podiatrists	Not in top 20 (Missed opportunity)
orthotech	Not in top 20 (Missed opportunity)

CRITICAL & IMPORTANT FINDINGS

High & Medium Severity

Four findings requiring attention to improve search visibility and AI extraction.

WEBSITE HEALTH 2 Severity Core technical SEO elements The website appears to have fundamental technical SEO elements in place, supporting basic crawlability and indexability. COMMERCIAL CONSEQUENCE A solid technical foundation ensures search engines can efficiently access, crawl, and index the website's content, which is crucial for organic visibility. → Continue regular monitoring of core web vitals, mobile-friendliness, and site speed. Implement a robust internal linking strategy to distribute link equity effectively. Light lift Priority 1	GOOGLE LISTING 0 Severity H1 tag relevance to page content The H1 tag 'ABOUTORTHOTECH LABORATORY & ORTHOTICS' does not accurately reflect the primary content of the page, which is a testimonial. This creates a disconnect for users and search engines. COMMERCIAL CONSEQUENCE Search engines may struggle to understand the primary topic of the page, potentially leading to lower rankings for relevant testimonial-related queries. Users might also be confused if the heading doesn't match the content. → Update the H1 tag to accurately describe the page's content, for example, 'Client testimonials' or 'What our clients say'. Light lift Priority 2
BUSINESS IDENTITY 2 Severity General JSON-LD schema implementation General JSON-LD schema markup is present on the page. COMMERCIAL CONSEQUENCE Structured data helps search engines understand the content and context of the page, potentially enhancing visibility in search results through rich snippets. → Regularly review and update existing schema to ensure it accurately reflects current content and adheres to the latest schema.org guidelines. Light lift Priority 3	AI READABILITY 2 Severity Content structure for answer engine optimisation The content is presented as a testimonial, which is a narrative format. While clear, it's not inherently structured for direct Q&A extraction by answer engines. COMMERCIAL CONSEQUENCE While testimonials are valuable for social proof, their narrative format may not directly contribute to answer engine visibility for specific factual queries. → Consider adding a dedicated FAQ section on relevant service pages to directly address common customer questions, optimising for answer engine visibility. Moderate build Priority 4

— VISUAL EVIDENCE & REMAINING FINDINGS

Screenshots & Supporting Detail

CUSTOMER QUESTIONS

Absence of FAQ content and schema

1 Severity

No visual FAQ content or corresponding FAQPage schema markup was detected on the page. This represents a missed opportunity to capture answer engine visibility.

COMMERCIAL CONSEQUENCE

Without FAQ content and schema, the website misses opportunities to appear in rich results for common questions, potentially reducing organic traffic and visibility in voice search.

- Research common questions related to orthotics and Orthotech's services. Create a dedicated FAQ section on relevant pages (e.g., service pages or a general FAQ page) and implement FAQPage JSON-LD schema markup to enhance answer engine visibility.

Moderate build

AI PRESENCE

Optimisation for AI answer engines

1 Severity

While general JSON-LD schema is present, the absence of specific FAQ content and corresponding schema limits the page's ability to generate direct answers in AI search results.

COMMERCIAL CONSEQUENCE

The website may not be fully optimised to provide direct answers to user queries via AI answer engines, potentially losing out on valuable 'position zero' visibility and traffic.

- Develop and integrate structured Q&A content (FAQs) with appropriate schema markup on relevant pages. This will provide clear, concise answers that AI answer engines can easily extract and present to users.

Moderate build

SUMMARY

Where to from here?

Fix now (effort estimation)

High & medium severity items

1

 **Light lift:** Continue regular monitoring of core web vitals, mobile-friendliness, and site speed. Implement a robust internal linking strategy to distribute link equity effectively.

2

 **Light lift:** Update the H1 tag to accurately describe the page's content, for example, 'Client testimonials' or 'What our clients say'.

3

 **Light lift:** Regularly review and update existing schema to ensure it accurately reflects current content and adheres to the latest schema.org guidelines.

4

 **Moderate build:** Consider adding a dedicated FAQ section on relevant service pages to directly address common customer questions, optimising for answer engine visibility.

5

 **Moderate build:** Research common questions related to orthotics and Orthotech's services. Create a dedicated FAQ section on relevant pages (e.g., service pages or a general FAQ page) and implement FAQPage JSON-LD schema markup to enhance answer engine visibility.

Immediate action items

Coming month 2

UX Audit - what we'll review next.

→

Navigation structure - clarity, depth and mobile usability

→

Page load speed - Core Web Vitals, LCP and INP assessment

→

Mobile tap targets - size, spacing and accessibility on small screens

→

User journey mapping - homepage to enquiry path review

→

CTA visibility - placement, specificity and conversion friction

Coming month 2

Needs deeper validation

Useful observations - require more context before prioritising.

?

Deep crawl analysis - uncover orphaned pages or redirect loops via Screaming Frog.

?

Keyword cannibalization - requires Google Search Console data to validate intent overlaps.

?

Backlink toxicity - needs third-party tools (Ahrefs/SEMrush) to assess referring domains.

?

Content gap analysis - benchmarked against top 3 competitors in AI Answers.

?

Advanced Schema - assessing viability for HowTo or VideoObject schema integration.

Needs deeper validation

BLUEROCK DIGITAL · 6-MONTH ROADMAP

A structured programme - one focused layer at a time.

Each month builds on the last. A website is not a set-and-forget asset; even small, targeted improvements can strengthen brand visibility, search performance, and the overall customer journey over time.
