BLUEROCK DIGITAL

Website Opportunity Review

Your customers are searching. The question is - can they find you?

- 93% of online experiences start with a search engine - if you're not visible, you're invisible.
- Over 60% of Google searches now end without a click, with users taking answers directly from AI Overviews.
- 1 in 4 people are already using AI tools like ChatGPT to find and recommend businesses.

This report reviews how ready your website is for both worlds: **Search (SEO)** and **AI Answers (AEO)**. Think of it as making sure your website works as hard as you do.

LIVE GOOGLE SEARCH VISIBILITY	
SEARCH TERM (TARGET)	POSITION & INSIGHT
scrap metal recycling Melbourne	Not in top 20 (Missed opportunity)
scrap metal recyclers	Not in top 20 (Missed opportunity)
industrial scrap metal	Not in top 20 (Missed opportunity)

EXECUTIVE SNAPSHOT - 6 FINDINGS REVIEWED

WEBSITE HEALTH

Core technical SEO foundations are sound

Good Severity

GOOGLE LISTING

Optimise meta title and H1 for consistency and conciseness

Medium Severity

BUSINESS IDENTITY

Foundational JSON-LD schema markup is present

Good Severity

AI READABILITY

Content is well-structured for user and AI comprehension

Good Severity

CUSTOMER QUESTIONS

Missing FAQPage schema for existing FAQ content

High Severity

AI PRESENCE

Improve AI visibility through comprehensive schema implementation

Medium Severity

OVERALL SEARCH FOUNDATION

Functional but Underperforming

The basics are in place. Targeted improvements will move you from 'found sometimes' to 'consistently recommended'.

6/10

MONTH 1 SEO & AEO Foundations	MONTH 2 User Experience	MONTH 3 Home Page First Impression	MONTH 4 Conversion & Trust	MONTH 5 Tech & Speed	MONTH 6 Full Funnel Audit
----------------------------------	----------------------------	---------------------------------------	-------------------------------	-------------------------	------------------------------

CRITICAL & IMPORTANT FINDINGS

High & Medium Severity

Four findings requiring attention to improve search visibility and AI extraction.

WEBSITE HEALTH

Good Severity

Core technical SEO foundations are sound

The website appears to have a solid technical foundation, indicating good crawlability and indexability for search engines.

COMMERCIAL CONSEQUENCE
A strong technical foundation ensures that search engines can efficiently discover, crawl, and index the website's content, which is crucial for organic visibility and ranking.

→ Continue to monitor core web vitals and other technical SEO metrics to maintain optimal performance and user experience.

Light lift

Priority 1

GOOGLE LISTING

Medium Severity

Optimise meta title and H1 for consistency and conciseness

The H1 tag is present and relevant, but there's a minor inconsistency in keyword usage ('scrapmetal' vs. 'scrap metal'). The meta title could also be more concise while retaining key service offerings.

COMMERCIAL CONSEQUENCE
Inconsistent keyword usage can slightly dilute keyword relevance signals. A less optimised meta title might reduce click-through rates from search results, impacting organic traffic.

→ Refine the H1 for conciseness and ensure consistent use of 'scrap metal' (two words) across all on-page elements. Optimise the meta title to be more impactful and keyword-rich, encouraging higher click-through rates.

Quick win

Priority 2

BUSINESS IDENTITY

Good Severity

Foundational JSON-LD schema markup is present

General JSON-LD schema markup is present on the page, indicating a foundational level of structured data implementation.

COMMERCIAL CONSEQUENCE
The presence of structured data helps search engines understand the context and entities on the page, which can improve how the website is represented in search results and contribute to better visibility.

→ Conduct a comprehensive schema audit to ensure all relevant entity types (e.g., LocalBusiness, Service, Product) are appropriately marked up to provide maximum context to search engines.

Moderate build

Priority 3

AI READABILITY

Good Severity

Content is well-structured for user and AI comprehension

The page content is well-structured with clear headings and supporting information, making it easy for users and AI to understand the core offering and value proposition.

COMMERCIAL CONSEQUENCE
Clear and well-organised content improves user engagement and helps AI answer engines extract information accurately, leading to better visibility in AEO results and a positive user experience.

→ Continue to develop content that directly answers potential user questions and provides clear value propositions, utilising semantic HTML where appropriate to further enhance structure.

CUSTOMER QUESTIONS

Missing FAQPage schema for existing FAQ content

High Severity

FAQ content exists on the /commercial-and-industrial-services page but lacks FAQPage schema markup. Without this structured data, AI answer engines cannot reliably identify it as Q&A content.

COMMERCIAL CONSEQUENCE

Failing to implement FAQPage schema means the website misses out on opportunities for rich results in search (e.g., expandable snippets) and direct answers in AI-powered search, reducing visibility and click potential.

→ Inject FAQPage JSON-LD into the of the page. No new section needed - schema-only fix.

⚡ Quick win

AI PRESENCE

Improve AI visibility through comprehensive schema implementation

Medium Severity

While some JSON-LD schema is present, the absence of specific schema types like FAQPage for existing visual FAQs limits the site's ability to appear in AI-powered answer engines for direct questions.

COMMERCIAL CONSEQUENCE

Limited AI visibility means the website may not be featured in 'answer boxes' or direct responses from AI search, leading to missed opportunities for top-of-funnel exposure and authority building.

→ Implement FAQPage schema for all visually presented FAQs to enhance visibility in AI answer engines and rich results. Additionally, explore other relevant schema types to provide comprehensive signals to AI.

🔧 Moderate build

SUMMARY

Where to from here?

Fix now (effort estimation)

High & medium severity items

1

 **Light lift:** Continue to monitor core web vitals and other technical SEO metrics to maintain optimal performance and user experience.

2

 **Quick win:** Refine the H1 for conciseness and ensure consistent use of 'scrap metal' (two words) across all on-page elements. Optimise the meta title to be more impactful and keyword-rich, encouraging higher click-through rates.

3

 **Moderate build:** Conduct a comprehensive schema audit to ensure all relevant entity types (e.g., LocalBusiness, Service, Product) are appropriately marked up to provide maximum context to search engines.

4

 **Light lift:** Continue to develop content that directly answers potential user questions and provides clear value propositions, utilising semantic HTML where appropriate to further enhance structure.

5

 **Quick win:** Inject FAQPage JSON-LD into the of the page. No new section needed - schema-only fix.

Immediate action items

1 Critical · 2 Important · 0 Low - Prioritised order recommended before full scoping.

Coming month 2

UX Audit - what we'll review next.

→

Navigation structure - clarity, depth and mobile usability

→

Page load speed - Core Web Vitals, LCP and INP assessment

→

Mobile tap targets - size, spacing and accessibility on small screens

→

User journey mapping - homepage to enquiry path review

→

CTA visibility - placement, specificity and conversion friction

Coming month 2

Needs deeper validation

Useful observations - require more context before prioritising.

?

Deep crawl analysis - uncover orphaned pages or redirect loops via Screaming Frog.

?

Keyword cannibalization - requires Google Search Console data to validate intent overlaps.

?

Backlink toxicity - needs third-party tools (Ahrefs/SEMrush) to assess referring domains.

?

Content gap analysis - benchmarked against top 3 competitors in AI Answers.

?

Advanced Schema - assessing viability for HowTo or VideoObject schema integration.

Needs deeper validation

BLUEROCK DIGITAL · 6-MONTH ROADMAP

A structured programme - one focused layer at a time.

Each month builds on the last. A website is not a set-and-forget asset; even small, targeted improvements can strengthen brand visibility, search performance, and the overall customer journey over time.
